# INTRODUCTION TO INTERNASA

The International Academy of Science and Arts ([InterNASA.org](http://InterNASA.org)) is a worldwide alliance of like-minded professionals like yourself who are actively committed to making the world a better place, for all to thrive and advance into new frontiers. The Academy of Science and Arts was established to be the scientific engineering, mathematical, arts and humanities Institution akin to the League of Nations, and humanities, in service of your vocation, humanity and Nature. The by-laws have done away with some of the stuffy shirt roadblocks of other global academies with arthritically attached ways of the past century. The Academy is completely interactive worldwide and socially active, yet most important committed to scientific principles, freedom of artistic expression, and non-politically-driven programs, policies and positions.

The Academy of Science and Arts has appointed 14 leaders from its multidisciplinary team to head its first Enterprises and Institutes. The first two enterprises to be owned by and now powering the Academy of Science and Arts are Motion Physics LLC and ManyOne LLC, both headquartered in Salt Lake City, Phoenix with operations spanning several states including California, Oregon and Washington, D.C.

Motion Physics is an R&D and Incubation Laboratory discovering, exploring, testing and deploying technologies for gravitational propulsion, clean energy and infrastructure-transforming materials science technologies. These technologies will power governmental organizations including NASA, Department of Defense and enterprises which may include Boeing, Lockheed, SpaceX and others in the aerospace sectors.

ManyOne.org has pioneered the “Cloud of Clouds” — integrating the APIs and gateways spanning everything from domain and hosting providers, to payment and logistics gateways, all the way to Apple, Google, Amazon and Microsoft OSes, Clouds, Apps and smart devices. Through a breakthrough financial-monetary revenue sharing model, ManyOne.org empowers content creators and community building on the Web and within App Clouds to transform, democratize, and turbocharge the Internet economy.

These two independent 25 year initiatives have involved thousands of people, but they have heretofore operated entirely independently, and many participants are unaware of the “other” effort. Both were founded by Joseph P. Firmage, an early internet pioneer who founded Serius Software and US Web CKS, achieving notoriety as “the Fox Mulder of Silicon Valley” in the late 90s and early 2000s. These two projects have now joined together under the single logo of the Academy of Science and Arts. Firmage’s intention for this effort is grand, and inspiring: “to catalyze a Second Renaissance for Humanity”.

## PEOPLE DON'T FIGHT OVER VALUELESS THINGS

Most successful enterprises experience periods of extreme challenge and sometimes even worse. The International Academy of Science and Arts, ManyOne, and Motion Physics are no different. From 2009 through 2016, significant challenges occurred. These included hostile attempts to wrest control of extremely valuable technologies — nearly two decades in the making — from their founder and partners worldwide. These hostile acts included:

- ◆ Unauthorized access to company communications lists for intentional degradation of the reputation of Management, particularly the Founder and CEO, Mr. Firmage.
- ◆ Intentional violation of the unnecessary Chapter 7 bankruptcy of ManyOne Networks Inc. in 2009 by intermingling that corporation with ManyOne LLC, and/or of anything 'ManyOne', causing irreparable harm to all parties
- ◆ Illegal hostile takeover attempt regarding extremely sensitive physics IP and grand theft of advanced physics devices paid for by Mr. Firmage and investment efforts
- ◆ Corporate espionage and conspiracy of parties involved
- ◆ Libel and slander directly damaging the enterprises and their executives
- ◆ Undermining the merchant banking capacities of the enterprises
- ◆ Engaging in unauthorized international delegation of domestic banking systems

These challenges have been strategically overcome through substantial financial expense, significant management experience and strong adherence to principles of integrity and fiduciary capacity of the enterprise's management team as led by Mr. Firmage. To say that such accomplishments have been daunting while extremely successful would be a gross understatement.

This plan was also well-conceived and was the consideration of the Academy overall debt retirement program known as Waterfall, which represents management's commitment to repay obligations of the past instead of following the course of default so often chosen in such circumstances. In other words, we are entirely committed to fulfilling all legitimate obligations, past and present, and have successfully been working toward that fundamental end.

The Academy's primary enterprises and institutes are now ready to launch worldwide in good standing and with an historic high-water mark of integrity to assist those who were harmed by the actions of the hostile parties, now out of the picture. It is a relief to all involved that such times are behind us and now allow us to move forward with new and appropriate haste.

"Congratulations is not a big enough word describing what has been done by Mr. Joseph Firmage and his executive team in behalf of the Academy. To bring together capital, equity, debt, labor, products and services is an accomplishment rarely achieved, if ever. It is my pleasure to commend all who have been involved in such a momentous effort, and I am proud to be a part of this team," said David Shaw, Chief Strategy Officer and General Counsel.

Paula Collins, formerly General Manager of USWeb Atlanta during Firmage's leadership of the consulting giant USWeb/CKS from its founding in 1995 through its \$3+ billion value by 1999 said, "Every time I talk with Joe Firmage, he expands my mind – and sometimes he blows my mind. Like today. I continue to be amazed by the balance of his brilliant mind and his big heart. As an investor I'm grateful to have helped Joe and his team advance the Academy of Science and Arts. We worked together 20 years ago to change the world, and it looks like round two of a world-changing alliance." Paula has joined the Board of Trustees of the Academy.

Dr. Charles L. Dickens, President of the Academy enterprises added, "As an alumnus of Morehouse College it is uniquely special to bring Paula and Atlanta onboard. I look forward as an opportunity of this homecoming to expand the sphere of influence and empowerment, through access to advanced technologies, for a once-historically disenfranchised people."

Dr. Robert Corell, Vice Chancellor of the Academy and a leader of both United States and United Nations Climate Change Programs, stated, "After years of effort and over \$250 million raised and deployed creating its primary components, I am proud and grateful to have been part of the genesis of the Academy since 2003, and now to see our enterprises and institutes come to life to serve the world. What inspires me most is that the technologies of ManyOne.org and MotionPhysics.org have the realistic potential of quickly and massively impacting a singular climate emergency that threatens the human species." He continued, "I am honored to be involved at the cutting edge of research and discoveries that may not just slow down decay of our biosphere, but to reverse decay into a renewal of the living ecosystems, and spark a second renaissance."

## **OUR INTERNATIONAL ACADEMY OF SCIENCE AND ARTS COMMUNICATIONS NETWORK**

The establishment of the International Academy Communications Network (<http://InterNASA.org>) is fundamental, instrumental and paramount in transitioning InterNASA.org's comprehensive business plan into this final phase of its ultimate success. This point cannot be overemphasized. InterNASA.org Communications Centers will be the interface of the majority of sales activity and client revenue. The Centers shall also serve as the basis for customer development and customer relations.

The establishment of the International Academy National Communications Network must take prominence at this stage of our newly-revealed open source enterprise. The Communications Centers among the flagships of the entire set of institutions and companies, and will be the first chance for the Academy to make an impressive first impression.

All Centers must follow the Academy corporate guidelines including, but not limited to, all federal and state laws and best practices in telemarketing, and will be subject to ManyOne's Open Company oversight.
